To invoke the applet a servlet has to be written. The servlet takes the browser name, ~~and~~ version no. as parameters, ~~and~~ and generates the following code.

```

[
  <applet code= " _____.class" ARCHIVE= " _____.jar" >
    <param ____ = ____ >
    <param ____ = ____ >
    </applet>.
]

```

Add/modify Login ?

21/9/93.

- ① Add Bookmark. open a dialog box with the following

| | |
|-------|----------------------|
| Name: | <input type="text"/> |
| URL: | <input type="text"/> |

- ② Delete bookmark:

| | |
|-------------------------------------|----------------------|
| <input type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |
| <input checked="" type="checkbox"/> | <input type="text"/> |

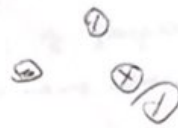

| | |
|-------------------------------------|----------------------|
| <input checked="" type="checkbox"/> | <input type="text"/> |
| <input checked="" type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |
| <input checked="" type="checkbox"/> | <input type="text"/> |
| <input type="checkbox"/> | <input type="text"/> |

First Servlet to show Tree. (total).

public class ShowTree extends HttpServlet -

- ① reads all directories underbook marks.
and stores in variable. (Enumeration).
- ②
 - ⊕ for directories
 - ⊖ for file.

| | |
|---|--------------|
| ⊕ | Personal - - |
| ⊕ | - - - |
| ⊕ | - - |
| ⊕ | - |

class

~~read~~ open directory (directory)
return String with full HTML
collapse directory (String directory)

ShowTree extends HttpServlet Throws - ... {

String path = req.getParameter("path")

String s = showDirectory(path);

<frame <src> ==>

Groups.

Create Group: - Create Directory of groupName.
Insert in table
Prompt if the name already exists.

Delete group: - Prompt if ^{members} exists
If yes - delete all members.
Delete directory.

Discard / Modify group: - change the name (rename) directory and
rename ⁱⁿ table.

Add shared user: - prompt if already exists
else create a new record in database.

Remove shared user: - ~~prompt~~ Prompt if does not exist
else remove from database.

Add into group: - prompt if already exists
else add in database. / javascript

Remove from group: ~~prompt~~ Remove from database.

① → By changing URL you should not see users.

② e-mail ID save — clarification required.

③ After Login — change screens — "welcome screen should be removed".
